Administration of the antibodies or their derivatives leads to an increase in the procoagulant activity of FIXa, even in the presence of FVIIIa inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitor patients. The antibodies or their derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic diathesis.

                                                                                                                                region 3 (CDR3) of an antibody having anti-Factor IX (FIX) or anti-activated Factor IX (FIXA) activity. Such antibodies and their derivatives (including those that comprise the present CDR3 peptide) have Factor VIIIa (FVIIIa) cofactor activity or FIXA activating activity. Administration of the antibodies or their derivatives leads to an increase in the procoagulant activity of FIXA, even in the presence of FVIIIa inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitor patients. The antibodies or their derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic diathesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New factor IX/factor IXa antibodies and their derivatives useful for increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as haemophilia A and haemorrhagic diathesis
                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of complementarity determining region 3 (CDR3) of an antibody having anti-Factor IX (FIX)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of a single chain FV (scFV) derivative CC of antibody 193/AD3, comprising the heavy (VH) and light (VL) chain CC variable regions of 193/AD3 joined by an artificial, flexible linker CC peptide. The scFV was obtained by PCR amplification of cDNAs for CC 193/AD3 VH and VL regions and cloning in vector pDAP2. 193/AD3 is CC an example of anti-human Factor IX (FIX)/activated Factor IX (FIX) and their derivatives, CC antibodies of the invention. Anti-FIX/FIX and their derivatives, CC including scFV and CDR3 fragments, have Factor VIIIa (FVIIIa) cofactor CC activity or FIXA activating activity. Administration leads to an CC increase in the procagulant activity of FIXA, even in the presence CC of FVIIIa inhibitors. This allows for xapid blood coagulation even CC in the absence of FVIII or FVIIIA, and in the case of FVIII or FVIII or FVIIIIA, and in the case of FVIII or FVIIII or FVIIIIA, and in the case of FVIII CC claimed pharmaceutical composition for treating patients with blood CC coagulation disorders, especially haemophilia A and haemorrhagic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                              Screening a mutant library for mutants unable to grow under specific conditions and for identifying loci involved in pathogenicity,

The present sequence is given in a specification relating to a method for CC screening a library of mutants. The method comprises constructing a CC library with insertions in genes and/or regulatory regions of the CC organisms of interest, where the insertion contains a tag and/or a CC transposon associated with a tag. The mutants are identified by CC hybridisation of the tags to known sequences. The method is useful for CC transposon associated with a Mycobacterial infection, CC suspected of being infected with a Mycobacterium, or having been CC exposed to an infectious Mycobacterium. It is also useful for identifying and isolating mutants of actinomycetales and for identifying CC compounds that have antibiotic activity. The method is used to identify CC M. paratuberculosis, M. bovis, M. leprae, M. avium, M. intracellulaire and CC M. paratuberculosis, N. bovis, M. leprae, M. avium, M. intracellulaire and CC It is especially useful for identifying loci involved in pathogenicity. It is useful in constructing vaccines. The method can be used to screen CC multiple libraries concurrently. It can screen libraries of different cryganisms or different strains of the same organism. The present protein is encoded by a gene which is disrupted by the insertion of the relications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 8; Fig 5A; 159pp; English.

                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; SEQ ID NO 16890; 21pp + Sequence Listing; English
                                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            genes from Drosophila
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2001-656860/75
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-MAR-2000; 2000US-191637P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Drosophila melanogaster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL10140-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        23-MAR-2001; 2001WO-US09231.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WO200171042-A2

CC The present invention describes substantially purified human proteins CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 CC in the specification). ABN15762 to ABN27252 encode the human ORFX CC proteins given in ABP00010 to ABR11500. ORFX proteins are useful for CC treating or preventing a pathology associated with an ORFX-associated CC disorder in humans, and in the manufacture of a medicament for treating a CC syndrome associated in gene therapy. ORFX sequences can be used in gene therapy. ORFX sequences can be used in the CC treatment of cancer, hyperproliferative disorders, chrhosis of liver, CC psociasis, benign tumours, keloid, degenerative disorders related to organ CC transplantation, cardiovascular diseases, diabetes mellitus, systemic CC transplantation thyroiditis, myosthyroidism, cholesterol ester CC storage disease, various immune deficiencies and disorders, infectious CC diseases, autoimmune thyroiditis, myosthenia gravis, graft-versus-host CC useful for treating burns, incisions, ulcers, for treating osteoporosis, CC useful for treatine thyroiditis, incisions, ulcers, for treating osteoporosis, CC useful for treatine disorders, or periodontal disease, and for gut reperfusion injury in various tissues and conditions resulting from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁

                                                                                                                  ANY43862-75 represent the amino acid sequences of the heavy chain (VH) gene sequences from antibodies against Bacillus anthracis spores. The antibodies are produced by different hybridomas, The specification describes monoclonal antibodies (especially IgG antibodies) which are highly specific and can discriminate between the spores of the Bacillus family. The antibodies are produced by exposing mice to Bacillus spores. The humoral immune response to Bacillus spores in the monoclonal antibody, and peptide fragments derived from the antibodies are also capable of binding spores. The monoclonal antibody, and peptide fragments of it, can be used to detect Bacillus spores in a field sample. It is particularly uses for detecting anthrax in a field sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               capable of detecting 1000 or more genes from Drosophila. The inventuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                   21-JAW-1998;
                                                                                                                                                                                                                                                                                            23-JUL-1998

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This is the amino acid sequence of the CDNA clone Bcl-like (HAICH29) used in the method of the invention. The products of the clone can lused for treating conditions associated with abnormal expression of the polypeptides. They can be used for e.g. treating chronic inflammatory diseases, immunological disorders, autoinmune diseases, inflammatory diseases, various allergies, and as anti-infectious age: The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated polynuclectides and encoded polypeptides - used develop products for treating e.g. inflammatory diseases, infections, immunological disorders, autoimmune diseases, all or tumours
                                                                                                                                                                                                                                                                 11-APR-1997;

CC The invention relates to an isolated protein that is one of 186 human CC secreted proteins, given in the specification, encoded by one of CC 309 cDNA sequences also given in the specification. The protein is used CC in a pharmaceutical composition used to prevent, treat or ameliorate a CC medical condition in e.g. humans, mice, rabbits, goats, horses, cats, CC dogs, chickens or sheep. Disorders which are diagnosed or treated include autoimmume diseases e.g. rheumatoid arthritis, hyperproliferative CC e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, CC angiogenesis, nervous system disorders e.g. Alzheimer's disease, CC e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, CC angiogenesis, nervous system disorders e.g. Alzheimer's disease, CC e.g. corneal infection. The polypeptides can also be used to aid wound cere consuburn, to maintain organs before transplantation, for supporting cell collure of primary tissues, to regenerate tissues and in chemotaxis. The CC polypeptides can also be used as a food additive or preservative to components. The present sequence represents one of the novel human CC cemponents. The present sequence represents one of the novel human CC cemponents. The present sequence represents one of the novel human CC cemponents. The present sequence represents one of the novel human CC secreted proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       22-AUG-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30' different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures -

                                                                                                                                                                                                                                                      The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where x is 1-11491 (see Table 1 ci the specification). ABN15762 to ABN27822 encode the human ORFX CC proteins given in ABR90010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated cd disorder in humans, and in the manufacture of a medicament for treating a cyndrome associated with ORFX-associated disorder. ORFX polymucleotide sequences can be used in gene therapy. ORFX sequences can be used in the ct treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders; haemorrhage, cransplantation, cardiovascular disease, diabetes mellitus, systemic transplantation, cardiovascular disease, diabetes mellitus, systemic transplantation, cardiovascular disease, diabetes mellitus, systemic disease, autoimmune thyroiditis, myasthenia gravis, graft-versus-host cd diseases, autoimmune thyroiditis, myasthenia gravis, graft-versus-host cd diseases and autoimmune thilammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, concertions or regeneration and treatment of lung or liver fibrosis, concertions or regeneration and treatment of lung or liver fibrosis, constemic cytokine damage.

CC N.B. The semmence damage.

                                                                                   용
                                                                                                                     Ś
                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant procein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC diagnostic amino acid sequences of the invention.

CC Mote: The sequence data for this patent did not appear in the printed CC artity. but was obtained in electronic format directly from WIPO CC at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 20; SEQ ID No 31040; 103pp; English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB seq length: 0

Electrophoresis 13:960-969 (1992)
-1- FUNCTION: Involved in the splicing process and participates early heat shock-induced splicing arrest. Due to their great structural variations the different isoforms may possess diffunctions in the splicing reaction.
-1- SUBCELLULAR LOCATION: Nuclear.

SUCH AS WOOL AND HAIR CONSIST OF MICROFIERIES EMBEDDED IN A RIGID
MATRIX OF OTHER PROTEINS. THE MATRIX EMPOTEINS INCLUDE THE HIGH-
SULFUR AND GLYCINE/TYROSINE-RICH PROTEINS, HAVING MOLECULAR
WEIGHTS OF 6-20 KDa WHEREAS THE MICROFIERIES CONTAIN THE LARGER,
LOW-SULFUR PROTEINS (40-56 KDa).
DEVELOPMENTAL STAGE: KAP6 PROTEINS ARE FIRST EXPRESSED IN
DIFFERENTIATING HAIR SHAFT KERATINOCYTES A CONSIDERABLE DISTANCE
ABOVE THE PROLIFERATIVE ZONE OF THE FOLLICLE BULB.
SIMILARITY: BELONGS TO THE KAP6 GLYCINE/TYROSINE-RICH TYPE II

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Biol. Chem.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FUNCTION: THE KERATIN PRODUCTS OF MAMMALIAN EPIDERMAL DERIVATIVES SUCH AS WOOL AND HAIR CONSIST OF MICROFIBRILS EMBEDDED IN A RIGID MATRIX OF OTHER PROTEINS. THE MATRIX PROTEINS INCLUDE THE HIGH-SULFUR AND GLYCINE/TYROSINE-RICH PROTEINS, HAVING MOLECULAR WEIGHTS OF 6-20 kDa WHEREAS THE MICROFIBRILS CONTAIN THE LARGER, EXCHENSULFUR PROTEINS (40-56 kDa).

DEVELOPMENTAL STAGE: THE KAP6 FOOTEINS ARE FIRST EXPRESSED IN DIFFERENTIATING HAIR SHAFT KERATINOCYTES, A CONSIDERABLE DISTANCE ABOVE THE PROLIFERATIVE ZONE OF THE FOLLICLE BULB.

SIMILARITY: BELONGS TO THE KAP6 GLYCINE/TYROSINE-RICH TYPE II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PROTEIN FAMILY.
